

Nova-Flo® NF3 Fixing Pack Instructions

Nova-Flo® is a mechanically activated flood prevention device that shuts off the tap supplies when the water level reaches the overflow and triggers a float activation mechanism within the central body of the unit.

Installing Nova-Flo® to a bath or sink requires an understanding of the individual plumbing arrangements. Installers must ensure water supplies can be isolated. We recommend using a qualified professional who is familiar with work of this nature to install a Nova-Flo® unit.

To ensure compatibility of fittings we recommend the use of one of the Nova-Flo® fixing packs, which include all necessary plumbing connections required for installation. Flexible hoses with integrated isolation valves are supplied for connection to the lower ports for ease of installation/maintenance and to ensure the Nova-Flo® is not installed under tension. Both push-fit and compression hose options are available.

For detailed installation instructions please refer to the instruction manual supplied with your Nova-Flo® unit.

Fixing Pack Contents:

Push-fit Option*

	Qty
A John Guest Straight Tap Connector 22mm x 3/4" BSP	2
B John Guest Straight Coupler 22mm	2
C SW Classic 300mm Flexi Hose 22mm push-fit to 22mm push-fit c/w Isolation Valve	2
John Guest Pipe Inserts (Plastic) 22mm	4

Compression Option*

	Qty
A John Guest Straight Tap Connector 22mm x 3/4" BSP	2
B John Guest Straight Coupler 22mm	2
D SW Classic 300mm Flexi Hose 22mm push-fit to 22mm compression c/w Isolation Valve	2
John Guest Pipe Inserts (Plastic) 22mm	4

* In addition to the supplied contents, installers will require a length of compatible 22mm pipe to run from the upper port connections of the Nova-Flo® to each tap supply. We recommend the use of John Guest 22mm push-fit pipework.

Lifescience Products Ltd are distributors of Nova-Flo®. For any installation queries please contact their helpline on +44 (0)1608 811707
